Village of Brownsville

Hydrant Flushing

Utility personnel will be performing
maintenance of water main and hydrant flushing
(weather depending) on

Tues. & Wed.

August 11 & 12, 2020

Be aware that flushing hydrants may cause rusty water and washing clothes is NOT advised.

Flushing of the mains removes natural deposits of iron and minerals that are harmless but affect the color, odor and taste of the water. Also this allows the utility to exercise and maintain hydrants to insure they are working properly.

Flushing will be done between the hours of 8:00 a.m.-3:00 p.m.

- When you see utility personnel working or water flushing from hydrants in your area, use little or no water for a period of 30-45 minutes to ensure that the water has settled down and that discoloration is not drawn into your residence or business.
- When you arrive home test your water for discoloration. If you do find discoloration in your water, draw the discolored water off through the COLD WATER TAP ONLY. Do not run an ice-maker, dishwasher, or washing machine until the discolored water has been drawn off, to avoid staining to your water heater or laundry.
